

Hello, I'm Sarah Bannister.

Skilled in UX/UI and front-end development, I'm a well-rounded designer who's obsessed with crafting great experiences.

EXPERIENCE

VML, Kansas City — *Art Director Intern*

June 2017 - Present

Art direction/user experience intern on the Ford team. I assist in updating UI screens for the FordPass app for iOS and Android along with participating in concept ideation sessions and daily scrum meetings.

Will Leather Goods, Eugene, Oregon — *Product Design Intern*

January 2017 - Present

I've gained experience designing physical products, using Illustrator to create high-fidelity tech packs. When I'm not working in the product design realm, I'm responsible for project management in the design team and managing products on our ecommerce site based on Shopify.

DESIGNATION, Chicago — *UX/UI Designer*

June 2016 - November 2016

I collaborated with design teams to build human-centered web products based on research and iterative rounds of testing. I gained a solid UX/UI skillset while working over 70 hours per week utilizing tools such as Adobe Creative Suite, Sketch and Invision. I completed two full UX/UI projects and redesigned and enhanced UX for clients and stakeholders.

NWTN - *Researcher, UX designer*

My design team and I built a high-fidelity prototype of 60 screens and annotated wireframes for a concussion detection app.

Rent Application - *Researcher, UX designer*

We created a complete remake of the current structural interface of a rental application management site. The client was thrilled and adopted our remake immediately.

General Assembly, San Francisco — *Full-Stack Web Developer*

March 2016 - June 2016

I learned many concepts and technologies in a fast paced, immersive environment. I fulfilled front-end and back-end roles working alongside other developers. As a result, I completed four full-stack web apps, each in week long sprints.

To-Doodling

Ruby on Rails to-do app

Handprint

AngularJS travel guide web app

PlanTastic

Ruby on Rails event planning web app

Anifull

Animal fact app built with MongoDB
